Assignment 2: (CLO-2 & CLO-3)

NAME: MOHAMED ABDI MOHAMED

ENR NO: 01-131232-045

NAME: WALEED AHMED RAZZAQI

ENR NO: 01-131232-095

1: Algorithm

Step 1: START

Step 2: Declare variables user_input and result as integers

Step 3: Take input from user and store it in user_input

Step 4: If user_input < 0 or > 101 then set result = -1

Step 5: Otherwise if user_input >=0 and <=5 then set result = 0

Step 6: Otherwise if user_input >=6 and <=12 then set result = 1

Step 7: Otherwise if user_input >=13 and <=19 then set result = 2

Step 8: Otherwise if user_input >=20 and <=50 then set result = 3

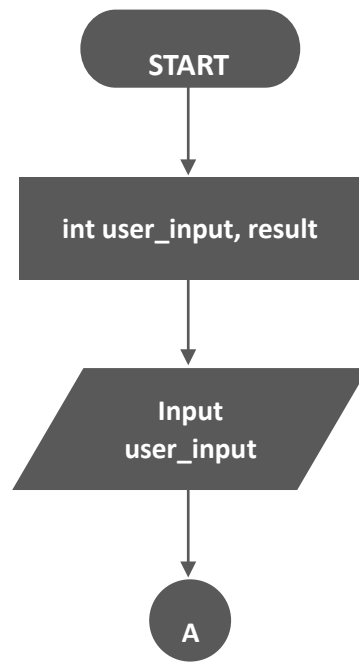

Step 9: Otherwise if user_input >=51 and <=60 then set result = 4

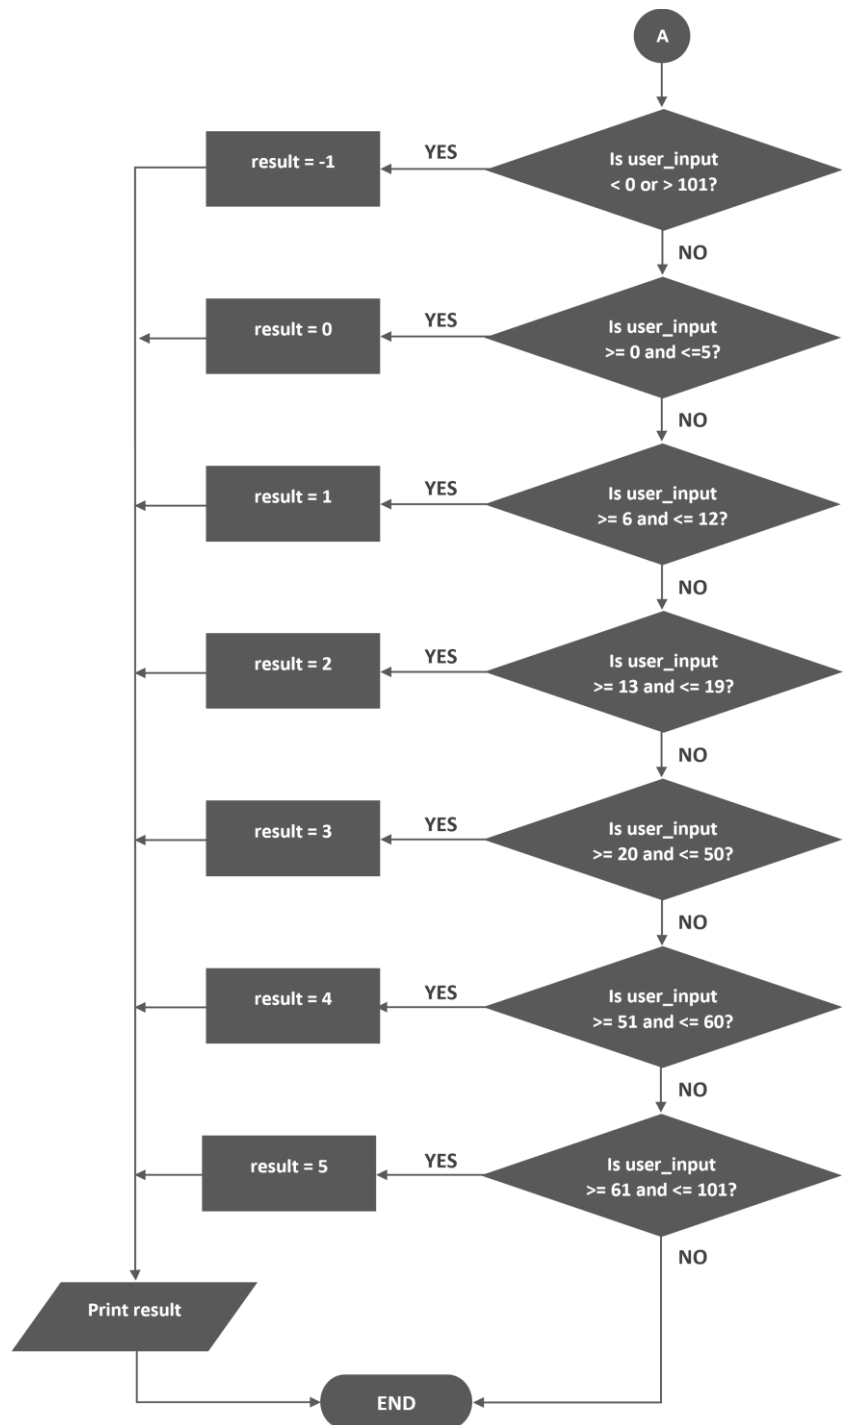

Step 10: Otherwise if user_input >=61 and <=101 then set result = 5

Step 11: Print result

Step 12: END

2: Flowchart

3: C++ Code

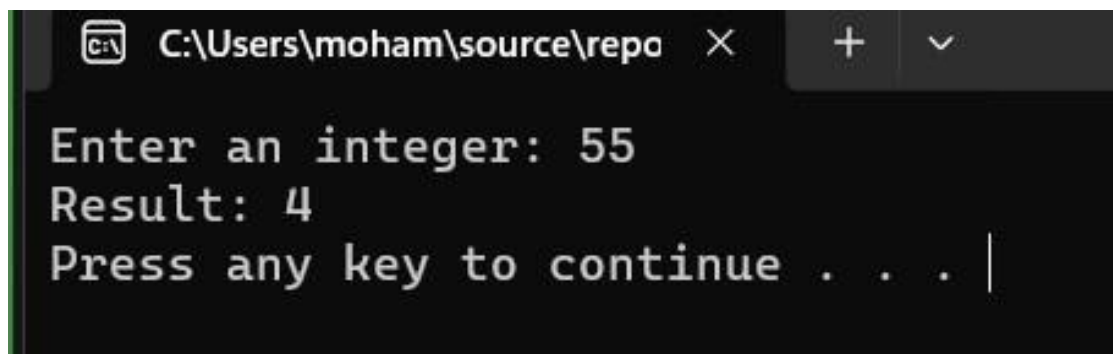

```

#include <iostream>
using namespace std;
int main() {
    int user_input, result;
    cout << "Enter an integer: ";    cin
    >> user_input;

    if (user_input < 0 || user_input > 101)
    {
        result = -1;
    }

```

```
}  
else if (user_input >= 0 && user_input <= 5)  
{  
    result = 0;  
}  
else if (user_input >= 6 && user_input <= 12)  
{  
    result = 1;  
}  
else if (user_input >= 13 && user_input <= 19)  
{  
    result = 2;  
}  
else if (user_input >= 20 && user_input <= 50)  
{  
    result = 3;  
}  
else if (user_input >= 51 && user_input <= 60)  
{  
    result = 4;  
}  
else if (user_input >= 61 && user_input <= 101)  
{  
    result = 5;  
}  
cout << "Result: " << result << endl;  
  
system("pause");  
return 0; }
```

```
C:\Users\moham\source\repo X + v  
Enter an integer: 55  
Result: 4  
Press any key to continue . . . |
```
